SICAT OPTISLEEP without CBCT scan – New approach for treating snoring and sleep apnea

SICAT introduces a new workflow for the OPTISLEEP therapeutic appliance

Bonn, Germany. 28.02.2024 – As a leading innovator in the dental industry, SICAT unveils a new approach for addressing snoring and obstructive sleep apnea (OSA). With a relentless focus on streamlining processes, enhancing the patient experience, and easing the pathway to effective treatment, SICAT introduces a new workflow based on optical impressions. Dentists can now order SICAT’s proven OPTISLEEP without the previously needed CBCT scan of the patient.

STREAMLINED WORKFLOW ENHANCES PATIENT COMFORT

The workflow for ordering the SICAT OPTISLEEP therapeutic appliance is straightforward for the dentist. Initially, an optical impression of the patient’s upper and lower jaw and the desired jaw relation is captured. Afterwards, the therapeutic appliance can be ordered via SICAT’s customer platform, the SICAT Portal. The dentist completes a PDF order form and uploads it alongside the optical impression in a zip file through the portal.

„By introducing the new workflow for the OPTISLEEP therapeutic appliance without a CBCT scan, we’re setting another milestone in our efforts to enable the treatment of sleep disorders such as snoring and sleep apnea. Our goal has always been to simplify access to effective treatment options while maximizing patient comfort. This step reaffirms our dedication to pioneering and prioritizing patient-focused solutions,“ states SICAT CEO Jochen Kusch.

ABOUT SICAT

As a leading innovator in the dental industry, SICAT develops and markets 3D-based analysis and planning software, surgical guides, and therapeutic appliances for various dental disciplines such as implantology, functional dentistry, sleep medicine, and endodontology and is a partner for dental practices, clinics, and dental laboratories worldwide. With its wide range of product solutions, SICAT paves the ground for advanced digital dentistry. Multiple data sources such as 3D X-ray, optical impressions, jaw movement data, and 2D intraoral sensor images can be combined with each other – for increased efficiency and quality of treatment. SICAT was founded in 2004 as a joint venture between HICAT GmbH and Sirona Dental Systems GmbH and is based in Bonn, Germany. Since the 100% takeover by HICAT GmbH on January 1, 2019, SICAT operates as a completely independent company.
