PRESS RELEASE

SICAT AT IDS 2023: Smart 3D Solutions for Dentistry

SMART IN EVERY WAY – SICAT Software with Smart Subscription & AI-based Guide Designs for Implantology and Endodontics

Bonn, Germany. March 13, 2023. SICAT stands for smart 3D solutions and this is exactly what SICAT is presenting at its very own IDS booth in Hall 10.1, Booth H012. Visitors will learn everything about the new SICAT Smart subscription plan and also have the chance to test SICAT software for 3 months free of charge. All visitors need to do is participate in the interactive SICAT Smart Challenge. Other topics in the spotlight: AI-based solutions and an outlook on future product innovations.

Following the motto "Start Smart with SICAT", SICAT will present its comprehensive range of smart 3D solutions for various dental disciplines at the 40th edition of the IDS.

SICAT sets trends and has launched some world firsts so far

With the *RAPID* **DIGITAL**GUIDE, SICAT addresses two trend topics at once: Artificial Intelligence and 3D printing. Based on AI, an STL surgical guide design is created and made available for download in less than 20 minutes and for only $19.90. The design can then be printed immediately in-office using a 3D printer which allows to promptly start treatment.

What already had an extremely positive market response with the *RAPID* **DIGITAL**GUIDE for implantology will also provide new opportunities for Guided Endo in the field of endodontics. As a product innovation and coming soon, SICAT announces already the launch of an AI-based and ready-to-print STL surgical guide design for Guided Endo. Available for download in less than 20 minutes for only $19.90 per tooth, all canals included. No manual design efforts required. The only thing you need: SICAT Endo V1.4 or higher.

SICAT Smart – Smart Payment, Smart Start, Smart Updates

Prospects will also learn all about SICAT Smart, SICAT's new subscription plan, with which a SICAT application of choice can be subscribed for as low as $99 per month. No minimum term, flexible and affordable. For the first time ever and as a special trade fair bonus, the interactive SICAT Smart Challenge gives visitors the chance to try out SICAT Suite applications free of charge.

SICAT Smart Challenge – Everybody wins

Who will be the fastest to perform implant planning in the SICAT Implant software? This is the question the SICAT Smart Challenge is all about. Everybody who visits the booth can participate and the best: all participants will automatically receive a voucher for a free 3 months trial of a SICAT application of choice and thus have the chance to get to know SICAT Smart at no risk. The 100 fastest participants will also take part in a raffle with 3 additional prizes to be won.

ABOUT SICAT

As a leading innovator in the dental industry, SICAT develops and markets 3D-based analysis and planning software, surgical guides, and therapeutic appliances for various dental disciplines such as implantology, functional dentistry, sleep medicine, and endodontology and is a partner for dental practices, clinics, and dental laboratories worldwide. With its wide range of product solutions, SICAT paves the ground for advanced digital dentistry. Multiple data sources such as 3D X-ray, optical impressions, jaw movement data, and 2D intraoral sensor images can be combined with each other – for increased efficiency and quality of treatment. SICAT was founded in 2004 as a joint venture between HICAT GmbH and Sirona Dental Systems GmbH and is based in Bonn, Germany. Since the 100% takeover by HICAT GmbH on January 1, 2019, SICAT operates as a completely independent company.
